INTEGRATED RISK MANAGEMENT

Automating peace of mind

# PHINITY RISK RESPONSE MANAGEMENT

Today's business leaders are constantly reminded of the external and internal threats and risks that may impact on their business goals, viability and operations.

Whilst their focus remains on the success of the business, they place a heavy reliance on their risk and assurance professionals to identify, assess and prepare the organisation for threats and risks, both physical and digital.

**Phinity's Risk Response Management** solution automates your risk management process seamlessly from documenting your risks and treatment actions, selecting your risk response, through to effective remediation and risk mitigation.

## THE CHALLENGE

Choosing the appropriate risk response and then managing risks and threats to a point of closure is often an under-resourced and inefficient phase of the risk management and assurance processes. This can cause business leaders to be ill-informed of their risk exposure, and businesses to be under-prepared and open to risks and threats materialising.

Typical risk response challenges that may resonate with you include:

**Lack of  
accountability for  
risk treatment**

**Manual and time  
intensive processes  
and reporting**

**Disparate  
sources of  
information**

**Multiple and  
mis-aligned  
processes**

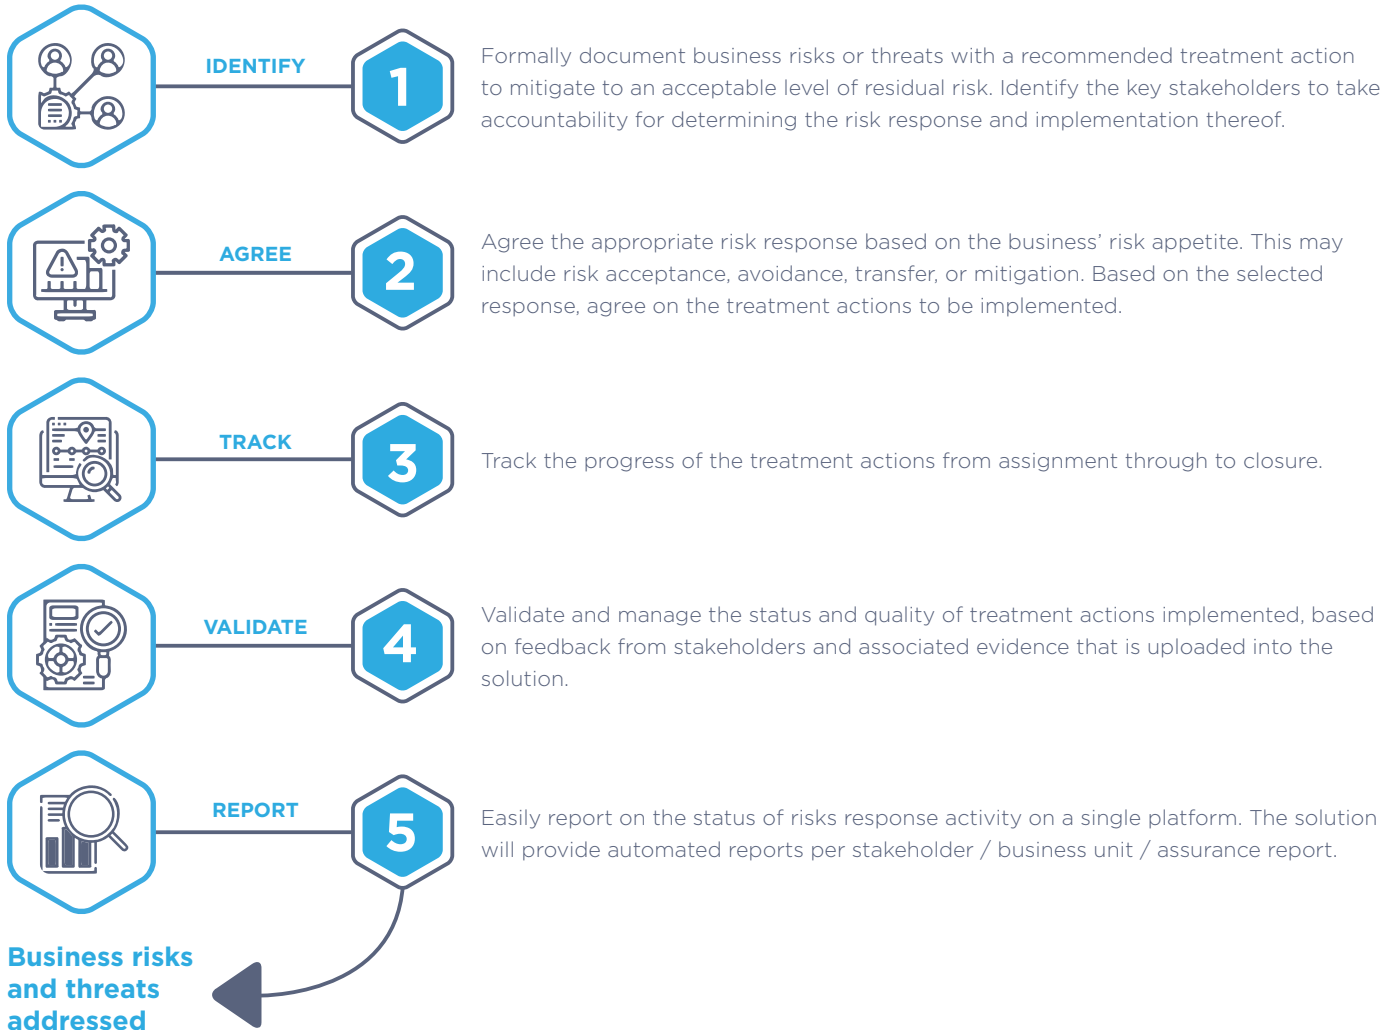

**Ineffective  
risk mitigation  
(repeat findings)**

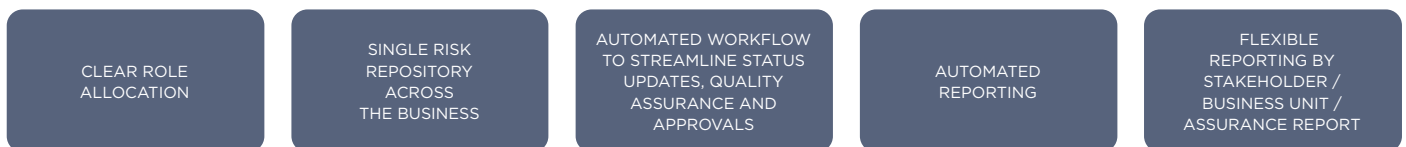

# THE SOLUTION

Phinity's Risk Response Management solution automates the risk management process, ensuring that risks and associated responses are well documented, accountability is clearly defined and progress to implement agreed treatment actions is tracked via the Phinity solution with a single repository and source of truth. Follow these 5 steps in the Phinity Risk Response Management solution to achieve automation and process maturity.

## START

## BENEFITS

**CLOSE KNOWN RISKS AND THREATS EFFECTIVELY.**
